SAVING LIVES ONE COURSE AT A TIME

### We must aim to break the chain of infection

Infections can be deadly and fatal when people are careless about them. A mild infection can become a pandemic in no time. We all have seen how COVID-19 took its course in 2020-2022. Thus, it's important for a Good Samaritan and responsible citizens to save themselves from catching or spreading infection of any type, including viral, fungal, or bacterial.

**What can we do about it to save ourselves from falling severely ill?**

**Identify the chain of infection and learn to break it**

## Let's break the chain of infection with steps like:

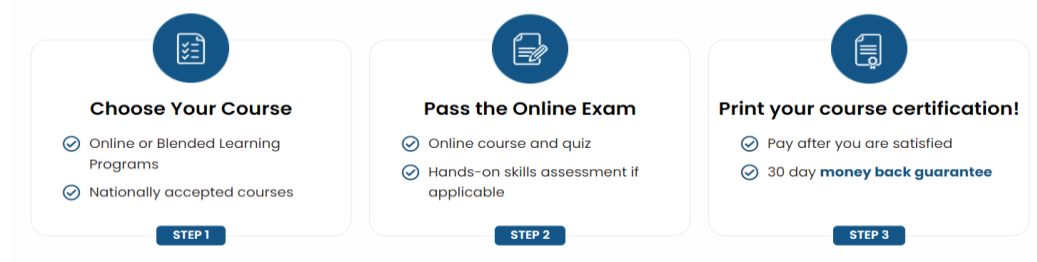

- Wash your hands regularly and efficiently.
- Cover your mouth when coughing or sneezing with a tissue or a handkerchief.
- Throw the tissue after use.
- Do not share the same handkerchief.
- Practice social distancing if it is a viral infection.
- Avoid sharing food or beverages that have already been touched or tasted.
- Clean the areas of the house or apartment which are prone to bacteria or dust particles.

 **Pro tip:** A comprehensive, updated, free, and nationally accredited Bloodborne Pathogens course from American CPR Care Association will help you identify allergens and pathogens on time. Then, you can be more cautious around patients having a viral, fungal, or bacteria infection.
